

# Setting up Application Environment

## IBM Cloud CLI Installation

Date	01 November, 2022
Team ID	PNT2022TMID35555
Project Name	Inventory Management System for Retailers

1. Navigate to <https://cloud.ibm.com/>
2. Search for Container Registry and Click Get Started and Follow the provided steps to install IBM Cloud CLI

The screenshot shows the IBM Cloud documentation page for 'Setting up the CLI'. The page is titled 'Setting up the CLI' and includes a sub-header 'Installing the IBM Cloud CLI and plug-ins'. The main content area lists the required CLIs and plug-ins to install: IBM Cloud CLI, IBM Cloud Kubernetes Service plug-in, IBM Cloud Container Registry plug-in, and IBM Cloud Kubernetes Service observability plug-in. A tip suggests using the IBM Cloud console instead of the CLI. The page also features a sidebar with navigation links for 'Kubernetes service' and 'How to' sections, and a right sidebar with a 'Feedback' button and a 'Cookie Preferences' button.

### 3. Download the suitable installer and run the .exe file in your windows machine
